The magazine. As ontour as it gets.

Q3 2026

Exciting Changes

In this issue, we take a look at the key developments from Q3 2026.

At a glance:

New employees, new vehicle designs, and the daily logistics chaos: A lot has happened in the third quarter. Here's a quick overview of some of the latest developments. You'll find all the details and more on the following pages!

Team Growth & New Apprentices
We're delighted to welcome our new colleagues and apprentices who have joined and strengthened our team since the third quarter.

ontour in the News: Why We Made the Front Page
Arson attacks, defense contractors, and somewhere in between: ontour.

CO_2 Emissions: Eco TransIT World Provides the Data
Together with our new partner, Eco TransIT World, we now provide our customers with accurate emissions data.

Vehicle Design: The New Look
We already gave you a first glimpse of our new Actros trucks in the last edition. This time, we're taking a closer look at the vehicle branding.

Furries, Donations, and a Car Turned Art Project
Sometimes the projects are unusual. Sometimes it's the communities behind them.

Security Warning: Scams and Identity Theft
How fraudsters are using a fake domain in an attempt to redirect freight inquiries while impersonating our dispatch team.

Did you know?

Across our locations, we offer our customers more than 6,000 m² of warehouse space. Whether you need short-term or long-term storage, we've got you covered.

Reinforcements
in Sales & New Apprentices

The ontour team kept growing in the third quarter: we're delighted to give a warm welcome to our new additions in sales, our new drivers and our new apprentices.

Welcome to the team, Leonie Perscheid! We're pleased to welcome Leonie to ontour as our new Commercial Sales Manager. With twelve years of experience in the logistics industry, she brings extensive expertise, a strong understanding of customer needs and a wealth of sales experience. In her new role, she will look after our customers, open up new business opportunities and work with our team to develop tailored transport solutions.

With the start of the new training year, we're happy to welcome two new apprentices to our team: Stiliyan Ivanov and Lena Siriranya Jakob. Since the beginning of August, both have been supporting us with great commitment as they train to become freight forwarding and logistics services specialists, gaining exciting insights into the many different processes in our industry. We're delighted to accompany them on their career path and wish them a successful start and lots of enjoyment during their apprenticeship at ontour.

Our Airfreight Export team is also gaining additional strength: with Tobias Hillenbrand, we have recruited a highly experienced logistics professional to take on the role of Team Leader. Together with Tim Koppermann, he will actively drive the further development of the department, challenge existing processes, introduce new ideas, and help shape a future-ready direction for the team. Tobias brings more than 30 years of experience in international logistics and air freight. Throughout his career, he has held senior positions at well-known companies within the industry, gaining extensive expertise in air freight operations, capacity management, branch leadership, as well as process and organizational development. This broad range of knowledge makes him a valuable addition to our team. With his extensive experience and strong focus on efficient operations, Tobias will play a key role in further developing our Airfreight Export team and ensuring it is well positioned to meet future challenges. We are delighted to welcome him on board and wish him every success in his new role.

We have also welcomed new colleagues to our other locations this year. At our Nuremberg branch, Rodrigue Nkalla has joined the team as a Dispatcher. Having successfully completed his retraining as a freight forwarding and logistics specialist, he brings the ideal qualifications to support the planning, coordination, and management of our transport operations. Our Munich office is also expanding its team: with Dimitri Schwalb and Serhii Venedyktov, two new dispatchers have recently joined the branch. In their new roles, they will help organize transports efficiently, implement customer requirements, and ensure the smooth execution of day-to-day operations. We are delighted to welcome our new colleagues to the team and wish them every success as they settle into their new positions.

ontour in the News

Why We Made the Front Page

Almost four weeks after the arson attack on a construction site in Munich's Berg am Laim district, two suspects are in pre-trial detention. One of the press photos from the scene shows an ontour truck. Around midnight on the night of September 3, 2026, several incendiary devices were thrown from a moving car onto a construction site in Berg am Laim. The site is located right next to the headquarters of technology and defense group Rohde & Schwarz and drone manufacturer Helsing. Whether either company was actually the target of the attack has not yet been established. One incendiary device ignited near several site containers, but a police patrol was able to put out the fire quickly. A second device, which had failed to ignite, was defused by specialist officers from the Bavarian State Criminal Police Office. Police cordoned off a wide area around the site while this was carried out. No one was injured, and the property damage was minor. A witness had observed the attack and alerted the police. During the subsequent search, a 28-year-old woman and a 38-year-old man were arrested that same night at a petrol station on Innsbrucker Ring. An investigating judge issued arrest warrants for both on charges of criminal damage and attempted arson. As the authorities suspect a political motive, the Munich Public Prosecutor General's Office has taken over the investigation. It is home to Bavaria's Central Office for Combating Extremism and Terrorism. Citing the ongoing investigation, the prosecutor's office has so far not confirmed media reports suggesting that Russian military intelligence could be behind the attack. The exact motive remains unclear. An ontour truck happened to be passing nearby that night and can be seen in the background of one of the press photos. The vehicle had nothing to do with the incident itself, and our driver was unharmed.

CO_2-Emissions

EcoTransIT World delivers the Data

More and more companies face the challenge of documenting the CO_2 emissions of their supply chains in a traceable way. That's why, together with our partner EcoTransIT World, we provide our customers with reliable and transparent emissions data for their shipments. The calculations follow recognized international standards and allow for detailed analysis by mode of transport and for any reporting period you choose. The data can also be easily exported and processed further for sustainability reports, ESG requirements or internal analyses. By integrating the emissions data directly into our processes, our customers get the information they need for transparent sustainability management quickly and easily. This gives them a solid basis for well-informed decisions and helps companies pursue their sustainability goals based on reliable data. Together with EcoTransIT World, we're helping to drive greater transparency and sustainability in the logistics industry.

Vehicle Design

The New Look

Our fleet continues to grow while presenting a fresh and consistent visual identity. Over the past few weeks, both our new Mercedes-Benz Actros tractor units and our Mercedes Sprinter have received their new ontour livery. The distinctive ontour arrow is instantly recognizable from a distance and, together with the modern design, ensures a strong presence on roads across Europe. As our vehicles travel to customers, partners, and logistics facilities every day, they serve as ambassadors for our company. With the new design, we are creating even greater brand recognition and ensuring that our vehicles stand out not only through their performance but also through their appearance.

We believe the result speaks for itself.

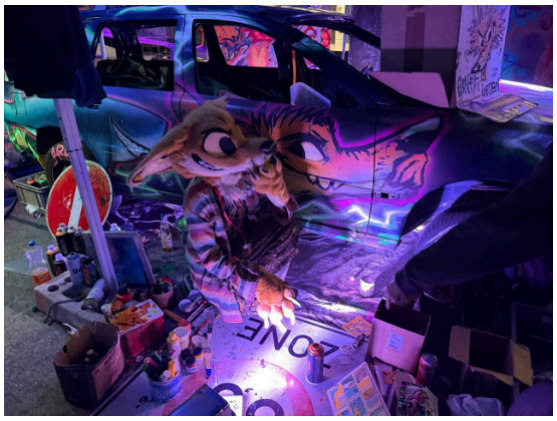

Simulator

Only flying is better

Special transports require special planning. This quarter, our team successfully managed the relocation of a complete Airbus A320 flight simulator from Frankfurt to Munich. A modern flight simulator consists of far more than just a cockpit. Numerous technical components, including visual systems, electronic control cabinets, motion platforms, and other specialized equipment, had to be carefully loaded, transported, and delivered safely to their new location. A total of seven vehicles were deployed for the project: four standard trailers, one flatbed trailer, one semi-low loader, and one large-volume box truck. Each component came with its own requirements in terms of loading procedures, cargo securing, and transport planning. When moving highly sensitive technology used daily for pilot training, precision, experience, and seamless coordination are essential. Thanks to the close cooperation of everyone involved, the project was completed safely, on schedule, and with great success. Projects like this highlight the versatility of the logistics industry. Every assignment brings new challenges, and that is exactly what makes transports of this kind so exciting. We would like to sincerely thank all our colleagues and partners whose commitment and expertise contributed to the success of this exceptional project.

Furries

Donations and a Car as an Art Project

The world of logistics always has surprising projects in store. A few weeks ago, we had the chance to support a very special undertaking that showed just how varied transport can be beyond our everyday business. At Eurofurence 2026 in Hamburg, a car became a collaborative art project. Artists from the Animal Art Crimes initiative and numerous event visitors decorated the vehicle on site, transforming it step by step into a one-of-a-kind work of art. What started out as an ordinary car turned into a creative community project that brought together people from different countries and all kinds of backgrounds. After the event, the car was taken apart into individual art pieces and auctioned off for a good cause, raising an impressive 20,000€ for charity. For us, it was an exciting experience to be part of a project that combines art, community and social engagement. Jobs like this show that logistics is about much more than simply moving goods. Behind many shipments are special stories, creative ideas and people who are passionate about making a difference. We look forward to supporting all kinds of projects in the future and helping extraordinary ideas reach their destination.

Security Alert

Scams and Identity Theft

Finally, we'd like to draw your attention to an important issue. Over the past few weeks, we have become aware of several fraud attempts in which unknown third parties tried to impersonate employees of our company. To do this, they registered a web address that looks deceptively similar to our own domain. Because two letters have been swapped, the difference is barely noticeable at first glance. The incidents came to light mainly in connection with transport requests on the TIMOCOM platform, where the perpetrators tried to broker or redirect shipments under our name. Thanks to the vigilance of our business partners, these attempts were detected early on. We want to make one thing clear: this is not a security incident within our IT systems. Following an immediate review with our IT department, we were able to rule out that any unauthorized persons gained access to our infrastructure or data. The perpetrators are operating entirely from the outside, using a so-called lookalike domain to gain people's trust. We therefore recommend that all business partners carefully check the sender address of incoming messages and, if in doubt, verify any changes to bank details, loading addresses or transport instructions by phone. If you notice any unusual requests or suspicious messages, please contact us directly through our known official communication channels. Of course, we immediately took the appropriate legal action and informed the relevant authorities. At the same time, we are continuing to monitor the situation closely. Our everyday commitment remains the same: reliable transport solutions, transparent communication and trusted relationships with our partners.

Thank you for your vigilance and the trust you place in us, which helps us tackle fraud attempts like these together.

ontour Sports - A Look Ahead

Munich 2026

This year, we once again have the privilege of supporting one of the world's largest sporting events with our logistics expertise. Following the successful operations of previous years, we are excited to be part of this remarkable project once again and to contribute our full range of logistics capabilities. The organization and execution of events on this scale require the precise coordination of countless logistics processes. From air and sea freight to customs clearance and domestic and international transportation, numerous stakeholders work together to ensure that equipment, technology, and materials arrive at each venue on time. Flexibility, rapid response times, and close collaboration across all teams are essential to making this happen. This year, we will support the events in Paris and Madrid with our own vehicles, providing key transport and delivery services on site. The main focus, however, will be on Munich, where we are responsible for managing the logistics operation from start to finish and coordinating every step along the supply chain. Once again, our team will play an important role behind the scenes, helping to ensure that everything runs smoothly where it matters most. We look forward to the challenges ahead!
